

Novasonar special features

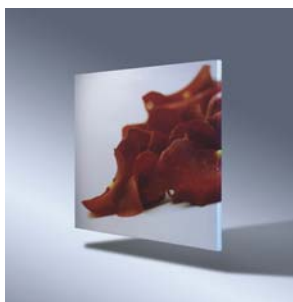

Passive crossover network (PN)

With the ML loudspeaker network, the loudspeaker can be operated with excellent sound quality using a conventional HiFi amplifier without additional expensive electronics being necessary.

High quality 100-V transformer

On demand we provide Novasonar loudspeakers with high quality customized 100-V transformers mounted on the inside of the loudspeaker, so the loudspeakers can be used with conventional 100 V systems.

Digital prints

For the Novasonar picture loudspeaker we laminate digital prints on canvas on the surface of the loudspeaker. Together with the designers of "Nachbar Fotografie" we create Novasonar picture loudspeakers with any of your favourite paintings or photographs.

Foamed surface

The special foamed surface makes it possible to spackle the Novasonar loudspeaker with gypsum plaster, so it can be built into massive concrete and brick walls or ceilings etc.

All products subject to technical modification without prior notice. Errors excepted
